

Long-standing cooperation

DSM creates innovative products and services in the field of *Life Sciences* and *Materials Sciences* that contribute to the quality of life. DSM's products and services are used throughout the world in a wide range of end markets and applications that support a healthier, more sustainable and enjoyable life style. Examples of end markets are food and health products for humans and animals, personal care products, pharmaceuticals, automotive industry, coatings and paints, electrical and electronic products, products for personal protection and products for the building industry.

When it comes to specific flooring applications, DSM has chosen to work with Bolidt for many years now. DSM Gist is the Delft branch of Royal DSM. DSM Gist is one of the world's biggest producers of baking yeast and baking ingredients, anti-infectives and enzymes for the food and fodder industry. For both the laboratories and the production units, DSM decided on the application of [Bolidtop®](#) flooring systems. Once again, Bolidtop met the specific mechanical, chemical, electric and aesthetic requirements that had been set for these spaces where oils, fats and syrups have to be taken into account. They can easily make a floor slippery. The floor finish must not absorb fluids, so has to be liquid proof. The joints around drains, gutters and grids need to be perfectly sealed.
